

## About SelectCarbon

SelectCarbon, part of Shell's nature-based solutions business, is a specialist carbon farming company that has operated **in Australia since 2010**.

SelectCarbon provides farmers with full-service carbon project solutions including design, registration, management, monitoring, and reporting.

## Designed for farmers. Backed by science.

We use innovative science and technology, combined with your local on farm knowledge and experience to develop productive carbon farming projects across Australia.

## Free Feasibility Assessment (No commitment).

- Assess viability and eligibility for a Soil Carbon Project.
- Calculate project area (ha) and design carbon estimation areas
- Estimate total Australian Carbon Credit Units (ACCUs) generated over 25 years, based on your land & management goals.

## Services

- Project Due Diligence, property title searches, regulatory approvals.
- Development of a detailed Land Management Strategy (LMS) for your project.
- Project design and mapping. Validation soil sampling and lab analysis.
- Registration of your project to the Clean Energy Regular (CER).
- Baseline soil sampling. That exceeds the requirements of the Method to detect small changes in soil carbon over time. We engage a third-party contractor to undertake baselining as required by the Method.
- Soil carbon stock baseline and offset calculations & reporting to CER
- Greenhouse gas (GHG) emissions baseline calculations & on-going monitoring and reporting.
- Ongoing project monitoring and soil sampling to ensure practices remain on track and align with productivity goals and building soil carbon.
- Audit management (at least three audits required for a 25-year project).

## Service Fee

**Select Carbon covers all costs involved for the services listed above**, including extensive soil sampling & laboratory analysis for the life of a project. We also cover all costs of the independent project audits required by the Method. **There are no upfront costs to farmers.**

Our Service Fee is an agreed share (%) of the Australian Carbon Credit Units (ACCUs) issued from your project. When you are issued ACCUs for your project, SelectCarbon will then receive a share of the credits issued. Demonstrating our commitment to designing and supporting a successful Soil Carbon Project on your behalf.
